Mifos Android Client is a mobile version of Mifos – management information system which provides key functionality for microfinance institutions: client management, portfolio management, loan repayment tracking, fee and savings transactions, and reporting.

Mobile client allows user to view the most important information about the customers and accounts and to perform the basic financial operations. Android client is directly connected to the full Mifos version, so every change performed in the mobile application is automatically reflected in the Mifos system.

Get it from  

Mifos Android Client is compatible with Mifos from version 2.2.3.
